Optimize Centres via dashboards, templates and notifications

- ALLITSM Centre Management can monitor all agreements, office occupancy, agreement renewals with a variety of dashboards to view the actual status and verify if the team is performing within the threshold of the defined KPI's.
- Where possible, templates are used to streamline handling of alerts and keep track of the progress, notifications and escalation triggers.

The ALLITSM Portal provides a customer facing view of the Service Catalog, Agreements, Invoices and Self-Help

- The Service Catalog lists all services available for the user.
- Via a view presented in a "Metro Style", the user can navigate through all relevant information. When the user is consuming certain services, he can search for related knowledge base articles, raise an incident or request an additional service.
- When a new request requires approval from the business before being sent to process, the approver can also use the portal to review and judge the request.

Name	Description	Price	Request this service
Increase Parking lots from 1 to 2		0,00	Request this service
